Guided, Purpose Driven UI

View all projects associated with user in a calendar form and options to make changes and manage.

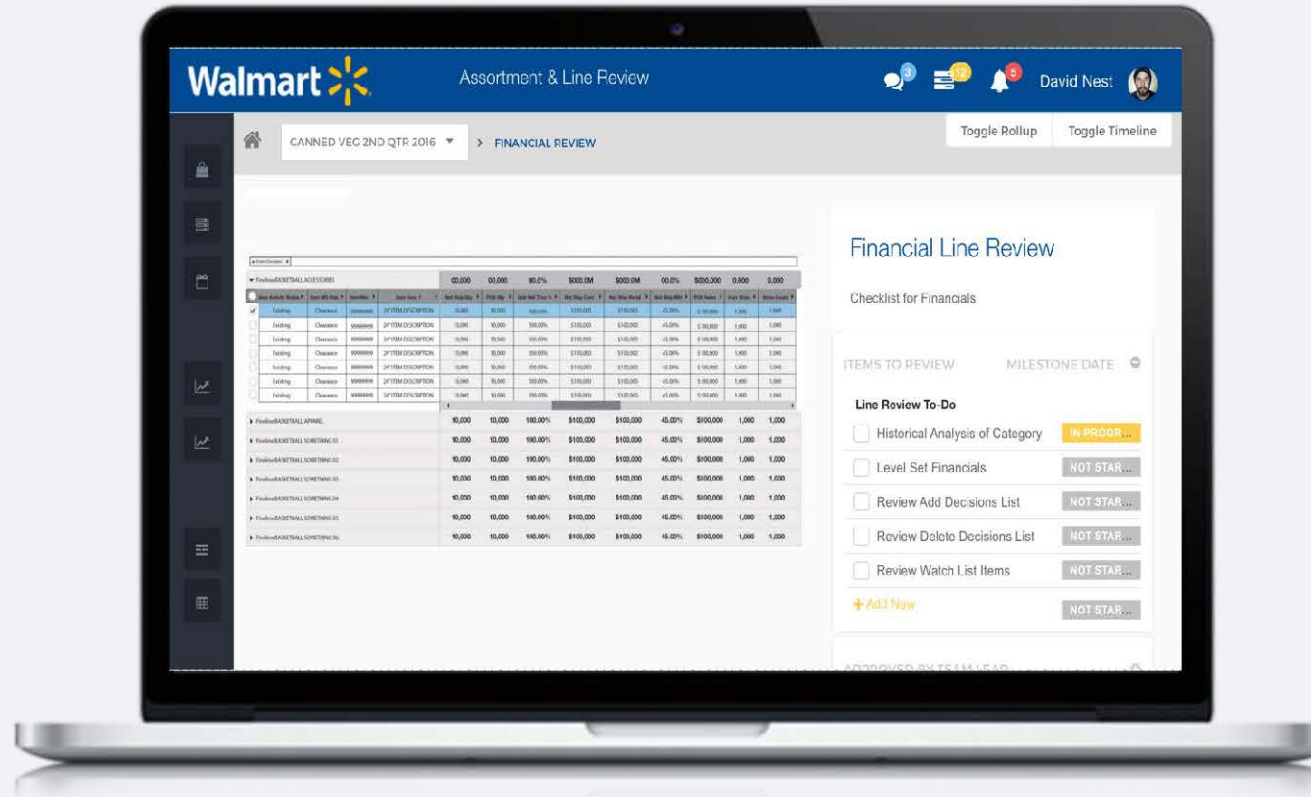

View your Financial Impact

Persistent view of Financial Roll-up

Purpose: financial analysis and forecasting that can be performed from any screen giving the User an up-to-the-minute view of the financials, allowing users to measure the impact of potential changes.

Total and Sub-Total

The User decisions in the application will be immediately reflected in the Financial Roll-Up, giving an "At-A-Glance" view of the impact of decisions upon the bottom-line so that multiple scenarios and decisions can be input in order to create real-time projections before committing occurs.

Adding visibility of customer insights

Map Application

Customer Insights

Integrating the Assortment Discipline and Line Review workflows allows the User to continue to use the AD metrics such as loyalty and <insert something AD>. This also means that AD metrics can be factored into the Line Review workflow.

When making buying decisions during the LR the User can not only view the financial impact of an item, the regional customer satisfaction and product loyalty can inform the decision making process when the User digs deeper into the performance of specific items.

Tool View

Purpose: Distraction-free workspace that creates consistency of use throughout the application. Intuitive UI combining current tools and best practices will help train users to use future tools.

Perspective ◦

Tools will all be considered from the perspective of what is the highest level of overview information that a user might want to see that will enable them to make the decisions they are trying to make. This would allow for both new users, and users who prefer a less detailed approach to work through the same flow as detailed users.

Drill Down ◦

All tools should be "drill down" capable; allowing users to access relevant data applicable to the decision making process, logically and within the workflow of each tool.
